DETAILED ACTION

1. The previous Office Action has been withdrawn due to a new Restriction/Election

Election/Restrictions

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. **Group I**, Claims 1-5, 11-16, 22, 25 and 28 drawn to a thin film transistor array, classified in class 257, subclass 59.
 - II. **Group II**, Claims 6-10, 17-21, 23, 24 and 26-27, drawn to a method for manufacturing a thin film transistor array, classified in class 438, subclass 149.

The inventions are distinct, each from the other because of the following reasons: Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case unpatentability of Group I invention would not necessarily imply unpatentability of the process of the Group II invention, since the device of group I invention could be made by processes different from those of group II invention, for example, the gate line in claim 3 can be formed by electrode plating instead of photography and etching step.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, the fields of search are not co-extensive and separate examination would be required, restriction for examination purposes as indicated is proper.

3. If the Applicants elect **Group I**, a further species restriction is required:

This application contains claims directed to the following patentably distinct species of the claimed invention: 1) A thin film transistor array substrate (claims 1-5), and 2) A thin film transistor array for a liquid crystal display (claims 11-16, 22, 25 and 28).

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

4. If the Applicants elect **Group II**, a further species restriction is required:

This application contains claims directed to the following patentably distinct species of the claimed invention: 1) Method of manufacturing a thin film transistor array substrate (claims 6-10), and 2) Method of manufacturing a thin film transistor array of a liquid crystal display (claims 17-21, 23, 24 and 26-27).

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include

all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
